Machine Vision-based Intelligent Recognition of Building Air Conditioning Interface

Practical Project
Supervisor: Helin Gong
Student: Marko Babic
January 2025

1 000 000 000

tons of CO₂

Source: ourworldindata.org

Project's purpose

I - taking pictures

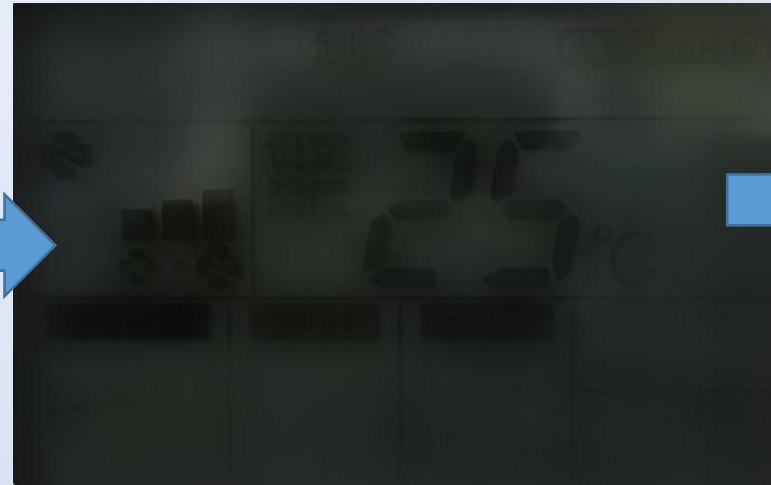

205
Pictures

II - model 1

Celsius Problem

III - model 2

First model's failure on picture n°2

Read minimum
5 pictures

GRAY/GREEN MASK

MAIN PROGRAM

**READING
+
NEW BLUR**

IV - testing program

LABEL = 25

Model 2' s result

Accuracy: 9,7%

Execution time: 38 minutes

V - mode1 3

Gamma Corrected Image

Adaptive Threshold with block size 21

Adaptive Threshold with block size 51

Adaptive Threshold with block size 81

Largest Cropped image by Width

model 3

Cropped image

model 2

Model 3' s result

Accuracy: 7,8%

Execution time: 1h25

VI - model 4

Largest Cropped image by Width

How to read a
low quality picture ?

Image processing

3 processes used

Dilatation

Closing

Median
Blur

Source: docs.opencv.org

We redo reading if :

empty

length \neq 2

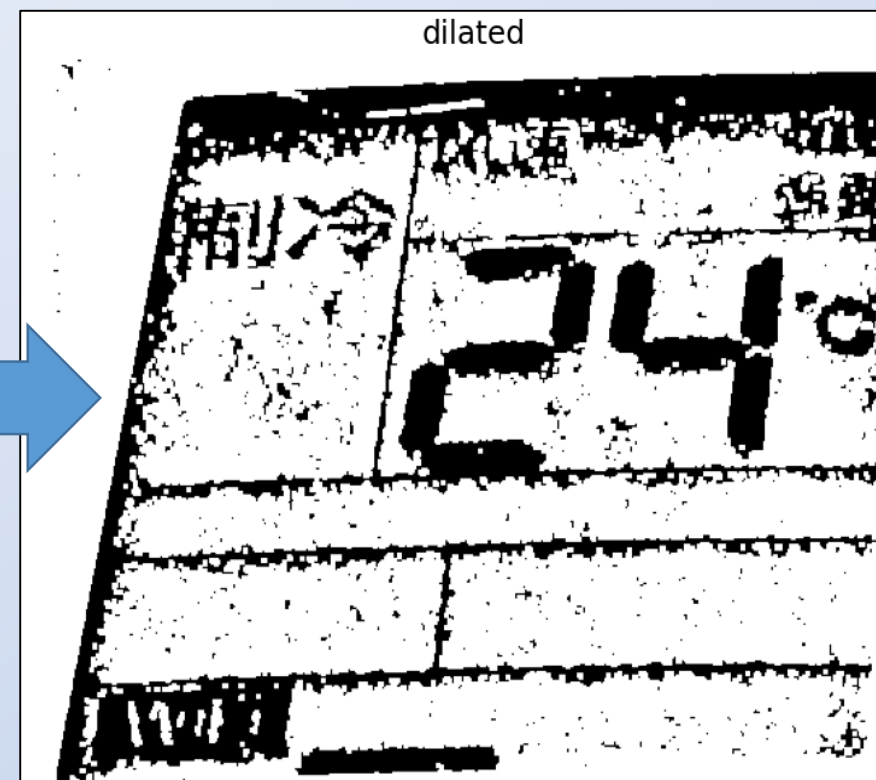

1 non digit
character

Gamma Corrected Image

Largest Cropped image by Width

Redo with new
parameters

Model 4' s result

Accuracy: 9,7%

Execution time: ~5h

VII – Problems and improvements
